Ar Daya Jaganathan
Director Zoe Global Edtech

Prepared for
Amit Govil
Chairman, Calance

1. Executive Summary

ZOE ONE™ is the world's first unified, AI-powered Global Regenerative Human Capital Development Ecosystem. It is not a conventional EdTech application. It is a Human Intelligence Operating System — a single platform with a single identity and a single learning journey for every user across their entire life.

The name encodes the philosophy: ZOE is the Greek word for life — growth, purpose, transformation, and human flourishing. ONE means a single platform. The ecosystem integrates the following domains:

- Education and Skills Development
- Professional Growth and Workforce Transformation
- Health and Wellness
- Sustainability Intelligence and Climate Finance
- Entrepreneurship and SME Development
- Smart Cities and Government Transformation
- Real World Asset (RWA) Tokenisation and Impact Finance

By 2035, ZOE ONE™ targets the following scale:

Audience Segment	Target Scale by 2035
Learners	100 million
Professionals	10 million
Educators	1 million
Small & Medium Enterprises (SMEs)	500,000
Corporations	100,000
Government Partners	50+

2. Product Vision and Strategic Context

Just as smartphones transformed how humanity communicates, ZOE ONE™ is designed to transform how humanity learns, grows, works, heals, and contributes to the world. The platform serves everyone — students, families, teachers, professionals, SMEs, corporates, governments, and NGOs — while creating measurable impact aligned with all 17 UN Sustainable Development Goals.

Phase 1 Launch Markets

- United Arab Emirates
- India
- Sri Lanka
- Kenya
- Madagascar
- Mexico

3. The Human Development Loop

The core of ZOE ONE™ is the Human Development Loop — a continuous, intelligent cycle that meets each person exactly where they are and guides them forward. The loop comprises six stages:

Stage	Name	Description
Step 1	Discovery — Who am I today?	Conversational AI onboarding generates a Personalised Learning DNA™ profile mapping cognitive strengths, learning style, skill gaps, career potential, and health habits.
Step 2	Awareness — What do I need?	AI surfaces a clear, non-judgmental picture of the user's current state and development gaps with warmth and specificity.
Step 3	Personalised Learning Path — What next?	Dynamic learning journey constructed by AI, drawing from the full ecosystem: academic, skills, professional, wellness, entrepreneurship, and sustainability content.
Step 4	Active Learning — Learning by doing	Visual Learning™, AI Simulation Engine™, and Virtual Laboratories™ engage users in experiential, adaptive learning.
Step 5	Progress Tracking — How am I growing?	Continuous mastery and behavioural growth tracking with dashboards for users, parents, teachers, and institutions. ZOT token rewards for completions and contributions.

Stage	Name	Description
Step 6	Reinvention — The loop continues	AI re-evaluates the profile, identifies new gaps and opportunities, and presents the next evolution. The loop persists across the user's entire life.

4. LearnSphereAI™ — Intelligence Engine Specification

LearnSphereAI™ is the advanced intelligence engine at the core of ZOE ONE™. It comprises ten integrated sub-engines:

Engine	Primary Function
AI Tutor Engine	24/7 personalised tutoring, adapts in real time to pace, mood, progress, and life circumstances
Visual Learning Engine	Converts concepts into interactive simulations and visual formats
Simulation Engine	Practice environments across engineering, medicine, business, agriculture, and more
Virtual Laboratory Engine	Hands-on science and technical experiments without physical constraints
Deep Mastery Assessment Engine	Granular skill and competency mapping across cognitive and professional dimensions
Personalised Learning Engine	Dynamic path construction from the full ZOE ONE™ content ecosystem
Multilingual Learning Engine	Multi-language support across all user-facing interactions
Career Intelligence Engine	Career pathfinding, skill gap analysis, and professional trajectory modelling
Predictive Analytics Engine	Forecasting user outcomes, dropout risk, and growth opportunities
Human Development Intelligence Engine	Holistic synthesis across all engines for whole-person development

5. Backend Technical Requirements

5.1 LLM Integration Layer

The AI Tutor™, onboarding conversational engine, career intelligence engine, and personalised recommendation system all require a robust LLM backbone.

- API integration with frontier models (Anthropic, OpenAI, or equivalent)
- Custom system prompt layer encoding ZOE ONE™ personality: empathetic, clear, encouraging, and precise
- Context-holding and cross-domain reasoning across education, health, sustainability, and career
- Emotional intelligence layer — responses must reflect emotional state awareness, not merely information retrieval

5.2 Long-Term Memory Architecture

This is the most critical technical differentiator. Unlike a standard chatbot, ZOE ONE™ must remember everything about the user over months and years. Requirements:

- Persistent user memory layer storing and continuously updating the Personalised Learning DNA™ profile
- Episodic memory: what did this user struggle with last week? What did they master last month?
- Semantic memory: long-term goals, values, and learning preferences
- Memory retrieval system: surfaces past interactions at the right moment with contextual relevance
- Privacy-compliant, user-controlled, and fully portable memory

5.3 Adaptive Recommendation Engine

- Maps user's evolving profile to content, tools, and modules across the ecosystem
- Accounts for emotional state, time availability, learning pace, and progress velocity
- Not reliant solely on content metadata — behaviourally and contextually aware

5.4 Assessment and Mastery Tracking Engine

- Granular skill mastery tracking over time beyond simple course completion percentages
- Deep competency mapping across cognitive, technical, emotional, and professional dimensions
- Real-time dashboards for individual users, parents, teachers, and institutions

5.5 Data Infrastructure and Analytics

- Scalable cloud infrastructure supporting millions of global users
- Real-time analytics dashboards for individuals, institutions, corporate clients, and government partners
- Architecture supporting B2C, B2B, B2G, and institutional revenue streams

5.6 Tokenomics Backend — ZOE ONE Token™ (ZOT)

- Learn-to-Earn™ — tokens awarded for course completions and certifications
- Teach-to-Earn™ — tokens awarded for mentorship and content contributions
- Impact-to-Earn™ — tokens awarded for verified sustainability actions
- Skill-to-Earn™ — tokens awarded for demonstrated skill competencies
- Innovate-to-Earn™ — tokens awarded for entrepreneurship and innovation activities

6. User Interface and User Experience Requirements

6.1 Onboarding — 3 to 5 Screens Maximum

Requirement	Specification
Duration	Must complete in under 2 minutes
Information collected	Name, age group, primary goal (learning / career / health / sustainability / all)
Tone	Warm, conversational — not a form, not a checklist
AI companion introduction	Human, conversational — establishes trust immediately
End-state	Personalised first insight delivered: 'Based on what you've told us, here is your first recommended step'
Drop-off prevention	Immediate value delivery at the end of onboarding

6.2 Design Language

Element	Specification
Colour palette	Warm off-whites, deep golds, soft earth tones — safety, warmth, and growth
Typography	Clean, generous, readable — clarity over cleverness
Spacing	Wide margins, breathing room — interface never feels cluttered or anxious
Micro-interactions	Gentle, purposeful animations — reward progress and guide attention, never distracting
Iconography	Clean, universal, culturally sensitive across UAE, India, Sri Lanka, Kenya, Madagascar, Mexico

Element	Specification
Accessibility	Full WCAG 2.1 AA compliance — non-negotiable given mission of democratic access

6.3 Gamification Layer

- Progress streaks, ZOT token rewards, mastery badges, and leaderboards
- Bold accent colours and celebratory animations in gamified zones
- Clear progress bars — always visible and meaningful
- Gamification must feel earned and meaningful — never cheap or trivial

6.4 Emotional Design Principles

- The app must never make a user feel judged, inadequate, or behind
- Progress visualisations must emphasise growth over deficit
- AI Tutor language must be warm, specific, and encouraging — never generic
- Notification design must be respectful of user attention and time

7. Phased Delivery Plan

Phase	Name	Key Deliverables
Phase 1	MVP — Internal Demo	Onboarding flow (3–5 screens, AI-driven profiling) · Personalised Learning DNA™ profile generation · AI Tutor™ in conversation with basic long-term memory · Sample learning path with 2–3 modules across content types · ZOT token reward mechanic (basic) · Brand-aligned UI on iOS and Android
Phase 2	Beta — Early Users	Expanded content library · Full memory architecture · Analytics dashboard · Multi-language support (English, Arabic, Hindi minimum) · First institutional partner integration
Phase 3	Launch-Ready Product	Full ecosystem integration · Government partnership modules · ZOT tokenomics fully operational · Real-time analytics for all user tiers · All Phase 1 market go-lives

8. Open Questions for Technology Partner — Calance

The following questions require responses from Calance as part of the preliminary proposal:

#	Question
Q1	How long will Phase 1 (MVP for internal demo) take to build?
Q2	How long will it take to be ready for structured beta testing with real users?
Q3	What is your recommended architecture for the LLM integration and long-term memory layer?
Q4	What is the estimated team composition and resource requirement for each phase?
Q5	What is your recommended technology stack across frontend, backend, AI, and infrastructure?

9. Non-Functional Requirements

Category	Requirement
Scalability	Architecture must support millions of concurrent global users from Phase 2 onwards
Privacy	User memory and data must be privacy-compliant, user-controlled, and portable
Accessibility	WCAG 2.1 AA full compliance across all surfaces
Multilingual	Phase 2 minimum: English, Arabic, Hindi. Phase 3: full Phase 1 market language coverage
Platform	iOS and Android from Phase 1. Web from Phase 2
Performance	AI Tutor response latency must not exceed 2 seconds for standard queries
Security	Enterprise-grade data encryption, tokenomics security, and government-grade compliance where applicable
Uptime	99.9% availability SLA for production environment from Phase 3 launch

10. Document Control

Document Title	ZOE ONE™ Product Specification Document
Version	1.0
Date	June 2026
Prepared by	Alias Jacob, Chairman — Vineyard
Prepared for	Amit Govil, Chairman — Calance
Classification	Confidential
Next Review	Upon receipt of preliminary proposal from Calance

"ZOE ONE™ — Learn. Grow. Transform. Thrive."
